

Delivery Protocols

- Deny facility access to delivery and truck drivers when feasible. [1]
- Contact companies that provide repeated deliveries where the delivery person typically comes into the space, such as the welding gas delivery person who handles the cylinders themselves, and inform of the new policy. [2]
- Leave deliveries untouched for a period of time such that the virus can subside on its own. For example, cardboard should be allowed to sit for forty-eight hours as indicated by the New England Journal of Medicine. [3]
- Sanitize deliveries that do not sit for the prescribed period of time before bringing the delivery into the facility and wash hands per CDC guidelines. [4]
